THE IMPORTANCE OF AVOIDING WASTE

Water is one of the earth's most precious resources. For the sake of your family and the survival of our future generations, here are some reasons why saving water is important.

Reason 1
Without fresh water we would die in just a few days. It is a simple morbid fact that helps drive the point across. Water equals life.

Reason 2
Using less water keeps money in your pocket. By utilizing basic water conservation techniques you are able to save lots of money.

Reason 3
Water conservation is critical for the environment, especially for the survival of endangered species.

Reason 4
Savvy water saves energy. In order to pump water from a central facility, water/energy is required.

Reason 5
Water conservation can reduce the occurrence of sinkholes.
Soldiers and gentlemen, I hope we can all start saving water today!

Water is one of the earth's most precious resources. To the state of human evolution and the survival of our future generations, the prudent use of our water sources and demand such is important.

I would like more people to know the importance of water. It is a simple fact that if we don't have water, we are going to have trouble. Water is vital to the survival of our species and is essential for the environment.

People often assume that water is available and abundant, but this is not the case. Many regions of the world are facing water shortages due to overuse and pollution.

I would like more people to practice water conservation techniques, such as turning off the faucet while brushing your teeth and fixing leaks in your home. Small actions can make a big difference. Water conservation is critical for the environment and our future.

I would like more people to become aware of water issues and take action to conserve it. Water is a precious resource that we must protect for future generations.
How can we save water?

- We can save water by closing taps that are not in use.
- Close the tap when (electric) cleaning your teeth.
- Fix leaking taps immediately.
- Think before running your glass under a running tap.
- Use a bucket of water to wash your car, (instead) instead of a hosepipe.
- Put a bucket out when it is raining to collect the water, you can reuse the rain water because it is clean water.
- Cover your swimming pool to prevent water evaporation.

- We are also killing out marine life, and soon enough it will be dying out. Those are just some ways to save water in our daily lives. Encourage others to start saving water today!
Nacibah Booley
Water Pollution

Before the 19th century people lived in harmony with their immediate environment. But as industrialization spread around the world, so has the problem of pollution. There are many things that pollute water. But the main things are oil, litter and chemicals. When people throw their papers, bottles etc. out of the windows, the wind then blows them into the dams, rivers, lakes and the ocean. Then the fish thinks it's food and eats it. It then starts threatening life. Once it pollutes the water, it starts polluting the air and it can affect human life too. Most rural areas do not have proper toilets so they use the dams, lakes and rivers. People also wash their clothes in there, making the water even worse. Some areas do not have access to clean water, so they drink the water from the dams, rivers and lakes, making them very sick.

We can stop this pollution problem by not littering. It can make a huge difference.
Introduction

It being water week we are going to be talking about ways to save water and the importance of water. We are also going to be speaking about water pollution.

We waste too much water in our everyday lives. Scientist predict that by 2025 1/3 of the world will be without water. We can change that if we start saving water. We suffer from dehydration when it’s hot because we don’t drink. How will our future generations feel because it’s only getting hotter?! We are also killing our marine life. We would like our future generations to know the beauty of water and marine life the way we do today. Start with the small with the small things and make it a habit in your daily lives. Start saving water today to save the future of our planet.

Conclusion

We have each spoken about water. We hope that you can take this with you and implement it in your daily lives. We hope you will encourage others around you to save water as well. Save water if you want our future generations to know marine life and for them to have clean water. On behalf of the Science Club thank you for your time.
